linkedin.com/in/rahuldeiv/

Master’s student specializing in AI Security, with a strong foundation in security principles, deep learning, and cryptography. Curious about researching AI-driven threats, securing large language models (LLMs), and contributing to research-focused roles in the intersection of security and AI.

EDUCATION

Radboud University <i>Master of Science in Cybersecurity & AI GPA: 8.2</i> Relevant courses: Security and Privacy of Machine Learning, Deep Learning, Online Tracking & Privacy, Applied Cryptography, Machine Learning in Practice	Nijmegen, Netherlands Aug 2025 – Present
BMS College of Engineering <i>Bachelor of Engineering in Electronics and Communication Engineering GPA: 8.06</i>	Bangalore, India Aug 2017 – June 2021
Indian Public School <i>Higher Secondary Education GPA: 8.42</i>	Kuwait March 2017

PROJECTS

Kaggle Akkadian Translator: LLM Fine-Tuning & NLP <i>PyTorch, LLaMA/Tower+, ByT5, PEFT/QLoRA</i> - Developed a dual-architecture translation pipeline, utilizing Byte-level T5 (ByT5) for character-level parsing and fine-tuning a 9B-parameter LLM (Tower+) via PEFT/QLoRA. - Engineered memory-efficient distributed inference for a 9B model across resource-constrained GPUs (Dual T4) by implementing CPU offloading, BF16 mixed-precision, and dynamic memory allocation.	
Prompt Injection Analysis on Mobile AI Agents <i>Agentic AI, Prompt Engineering, AI Security</i> - Investigated the security vulnerabilities of Android AI agents (Mobilerun and Mobile-Use) by designing prompt injection attacks that exploit their autonomous reasoning capabilities. - Designed an attack taxonomy and benchmark across 9 attack pathways, achieving a high Attack Success Rate (ASR) of 82% on Gemma4 and 54% on Qwen3.6, highlighting the need for robust security measures in agentic AI.	

CERTIFICATIONS

CompTIA Security+	Issued: July 2023
(ISC) ² Certified in Cybersecurity (CC)	Issued: July 2023

EXPERIENCE

Digital Security Group (DiS) @ Radboud University <i>Research Intern</i> Conducting research on the security of watermarking techniques used in large language models (LLMs), focusing on the robustness of watermarking techniques against a novel substitution based adversarial attack.	July 2026 – Present Nijmegen, Netherlands
Deloitte Consulting USI <i>Analyst - SAP ABAP</i> - Developed and maintained business-critical SAP ABAP code for enterprise-scale SAP systems, adhering to strict software development lifecycle (SDLC) and change control protocols - Collaborated with global support teams to deliver solutions for projects across diverse geographies - Performed root-cause analysis for high-priority incidents in production environments, ensuring rapid resolution and minimal business disruption	Aug 2021 – Aug 2025 Bangalore, India

TECHNICAL SKILLS

Languages: Python, C++, Bash Scripting, ABAP
AI & Machine Learning: PyTorch, TensorFlow, HuggingFace (Transformers, PEFT), scikit-learn
Agentic Automation & Security: OpenClaw, Mobilerun, Mobile-Use, Playwright, ADB (Android Debug Bridge)
Developer Tools: Git, VS Code
Core Competencies: LLM Vulnerability Assessment, Adversarial Robustness, Prompt Injection Analysis
