deiv.raahul@gmail.com
Nijmegen, Netherlands
github.com/rahuldeiv
linkedin.com/in/rahuldeiv/

Master's student specializing in AI Security, with a strong foundation in security principles, deep learning, and cryptography. Curious about researching AI-driven threats, securing large language models (LLMs), and contributing to research-focused roles in the intersection of security and AI.

EDUCATION

Radboud University

Master of Science in Cybersecurity & AI | GPA: 8.27

Relevant courses: Security and Privacy of Machine Learning, Deep Learning,
Online Tracking & Privacy, Applied Cryptography, Machine Learning in Practice

Nijmegen, Netherlands

Aug 2025 – Present

BMS College of Engineering

Bachelor of Engineering in Electronics and Communication Engineering | GPA: 8.06

Bangalore, India

Aug 2017 – June 2021

Indian Public School

Higher Secondary Education | GPA: 8.42

Kuwait

March 2017

PROJECTS

Kaggle Akkadian Translator: LLM Fine-Tuning & NLP | PyTorch, LLaMA/Tower+, ByT5, PEFT/QLoRA

- Developed a dual-architecture translation pipeline, utilizing Byte-level T5 (ByT5) for character-level parsing and fine-tuning a 9B-parameter LLM (Tower+) via PEFT/QLoRA.
- Engineered memory-efficient distributed inference for a 9B model across resource-constrained GPUs (Dual T4) by implementing CPU offloading, BF16 mixed-precision, and dynamic memory allocation.

Prompt Injection Analysis on Mobile AI Agents | Agentic AI, Prompt Engineering, AI Security

- Investigated the security vulnerabilities of Android AI agents (Mobilerun and Mobile-Use) by designing prompt injection attacks that exploit their autonomous reasoning capabilities.
- Designed an attack taxonomy and benchmark across 9 attack pathways by exploiting android accessibility (A11y) frameworks, achieving a high Attack Success Rate (ASR) of 82% on Gemma4 and 54% on Qwen3.6, highlighting the need for robust security measures in agentic AI.

PUBLICATIONS

Deivasigamani, Rahul, et al. "Not an A11y: How Android Accessibility Exposes Mobile AI Agents to Indirect Prompt Injection." arXiv preprint arXiv:2608.08939 (2026) *Accepted - AGENT-SEC @ ACM CCS 2026*

EXPERIENCE

Digital Security Group (DiS) @ Radboud University

Research Intern

July 2026 – Present

Nijmegen, Netherlands

- Conducting research on the security of watermarking techniques used in large language models (LLMs), focusing on the robustness of watermarking techniques against a novel substitution based adversarial attack.

Deloitte Consulting USI

Analyst - SAP ABAP

Aug 2021 – Aug 2025

Bangalore, India

- Developed and maintained business-critical SAP ABAP code for enterprise-scale SAP systems, adhering to strict software development lifecycle (SDLC) and change control protocols
- Collaborated with global support teams to deliver solutions for projects across diverse geographies
- Performed root-cause analysis for high-priority incidents in production environments, ensuring rapid resolution and minimal business disruption

TECHNICAL SKILLS

Core Competencies: LLM Vulnerability Assessment, Adversarial Robustness, Prompt Injection Analysis

Languages: Python, C++, Bash Scripting, ABAP, LaTeX

AI & Machine Learning: PyTorch, TensorFlow, HuggingFace, Transformers, PEFT, scikit-learn

Agentic Automation & Security: OpenClaw, Mobilerun, Mobile-Use, Playwright,

Developer Tools: Git, VS Code, ADB
